

The first day I installed XM radio in my vehicle I made my usual trip to Long Island from New Jersey. Because of XM's traffic reports I was able to avoid a 2 hour delay into New York. XM's traffic reports told me which roads were backed up and I took an alternate route not only saving myself time on my trip, but I was one less vehicle to add to the already congested roads, thus making it safer for other drivers and emergency crew. If everybody had XM radio and traffic reports like they provide, we wouldn't all be stuck on the same road causing traffic jams and possibly causing emergency situations.
